Rural Electrification

West Central - The Last Co-op to Incorporate

Pages 8-9

Generational Farmers

Pages 12-13

Rural Electrification served even the most rural communities.

Attention High School Sophomores and Juniors Win a Trip to Washington D.C.

Codington-Clark Electric will once again sponsor a high school sophomore or junior on an all-expense-paid trip to Washington, D.C. Each June, over 1,800 high school students travel to Washington, D.C., to participate in the Rural Electric Youth Tour. Throughout the week, participants will explore about Washington, D.C., learning about government, cooperative philosophy and rural electrification. The students are selected and sponsored by their local rural electric cooperatives with the South Dakota Rural Electric Association (SDREA) coordinating the trip for South Dakota students.

Tour highlights include the Lincoln Memorial, Washington Monument, U.S. Capitol, Ford's Theatre, Arlington National Cemetery, Mount Vernon, Tomb of the Unknown Soldier, Iwo Jima Statue, National Archives, U.S Supreme Court, and the Vietnam Veterans Memorial among other exciting sites. Students will also participate in a briefing with the South Dakota Congressional Delegation and a river boat cruise across the Potomac River.

Who is Eligible? All area high school sophomores and juniors whose parents are members of Codington-Clark Electric.

What Does It Cost? Codington-Clark Electric, along with the other participating local electric cooperatives fully fund the tour. The tour covers each participant's transportation, accommodations, meals, entertainment, and sightseeing events. Students are required to provide their spending money (for snacks, souvenirs, etc.).

When is it Held? The weeklong trip will take place from June 14-20, 2026. Participants will meet for an orientation meeting on Sunday, June 14 at the Sioux Valley Energy Office in Brandon, S.D. The group will then bus to Minneapolis and then fly the next morning to D.C. on Monday, June 15, and return to South Dakota on Saturday, June 20. A commercial bus will be used for transportation while in D.C.

How do I Qualify? Complete the Rural Electric Youth Tour to Washington, D.C., application form available at the schools or Codington-Clark Electric's website, www.ccelectric.coop. Submit the completed application form to Codington-Clark Electric before the November 1, 2025, deadline.

For more information, Contact: Codington-Clark Electric at 605-886-5848.

2026 June 14-20

YOUTH TOUR

Join students from across South Dakota for a free, once-in-a-lifetime trip to Washington, D.C., sponsored by Codington-Clark Electric.

Contact Codington-Clark Electric at 605-886-5848 or www.ccelectric.coop for more details and application information! Application deadline: Nov. 1, 2025.

Power Supply Update

Dave Eide
General Manager
C. 605-350-2765
davee@ccelectric.coop

A portion of Codington-Clark Electric's mission statement says that we will provide reasonably priced electric energy to the membership. Every day we work toward that goal. However, there have been many things going on at the wholesale level in our business that I should give the membership an update on that affect electric rates.

At the summer Basin Electric managers meeting and again at the recent Basin Electric annual meeting, Basin informed us they are proposing a wholesale rate increase that would begin January 1, 2026. There are several factors that are driving the proposed rate increase, and I'll do my best to summarize them.

- Basin has been investing heavily (billions of dollars) in new generation sources and bulk transmission to meet member demand.
- As a result, additional margins are required by Basin to maintain an adequate equity level. If equity levels become too low, borrowing costs rise substantially, which again has an effect on electric rates. Basin's equity target is 25%.
- Basin's 2026-2035 financial forecast showed significantly lower expectations for commodity prices at the Dakota Gasification Company. Some of the commodities produced there, including synthetic natural gas, ammonia and tar oil, all showed decreases in coming years.
- The Southwest Power Pool (SPP), the regional transmission organization, which Basin is a part of, has increased planning reserve margins which come at a major cost. Every day Basin sells and purchases power in the SPP market. Load serving entities such as Basin are required to have generation reserves that are dispatchable for reliability reasons. This is being done to compensate for the non-dispatchable generators such as wind turbines on the system.

The Basin Electric board will be voting on the proposed rate increase in September. If it is approved, there will more than likely be two rate increases from Basin, one in January 2026 and another in January 2027.

Though there's not a lot we can do about wholesale power costs, at Codington-Clark we will continue to look at everything we can to keep costs down and do everything possible to provide reasonably priced electric energy to the membership.

As always please feel free to call, text or email me at any time about rates or anything else. I'd be happy to visit with you, thank you.

Go Above and Beyond for a Safe Harvest

Anne Prince
NRECA

Modern farming often relies on data and equipment with GPS and auto-guidance systems. However, even with these modern conveniences, farm workers must remain vigilant. That's because farming is considered one of the most dangerous jobs.

Massive machinery is indispensable to farming, but the same impressive size, height and extensions make them particularly vulnerable to contacting power lines. That's why staying alert, focused and knowledgeable about potential hazards and safety procedures is crucial.

During a busy harvest season, the familiar sights around the farm can easily fade into the background, and farm workers can overlook the power lines overhead. However, failing to notice them can lead to deadly accidents.

360 Awareness

Awareness of your surroundings, around, above and below, and planning safe equipment routes can significantly reduce the risk of accidents. Even with GPS and auto-steering, it's imperative that farm workers keep a close eye on the equipment's location and are ready to take action if necessary.

Exposed underground powerlines, defective wiring in farm buildings and extension cords are also hazards. Grain bins can pose a potential danger as well. The National Electrical Safety Code requires power lines to be at least 18 feet above the highest point on any grain bin with which portable augers or other portable filling equipment are used.

Smart Harvest Safety Tips

To ensure a safer harvest season, SafeElectricity.org recommends the following tips to avoid electrical accidents on the farm:

- Exercise caution near power lines. Be careful when raising augers or the bed of grain trucks around power lines.
- Use spotters when operating large machinery near power lines. Ensure the spotters do not touch the machinery while it is moving near power lines.

- Lower equipment extensions, portable augers or elevators before moving or transporting equipment. Do not raise equipment, such as ladders, poles or rods into power lines. Remember that non-metallic materials like lumber, tree limbs, ropes and hay can conduct electricity, especially when damp, dusty or dirty.
- Never attempt to raise or move power lines to clear a path. Doing so could result in electric shock or death.
- Avoid using metal poles inside bins. Don't use metal poles to break up bridged grain inside or around bins.
- Hire qualified electricians. Ensure that qualified electricians handle work on drying equipment and other farm electrical systems.

While rare, the only reason to exit equipment that has come into contact with overhead lines is if the equipment is on fire. However, if it happens, jump off the equipment with your feet together and without touching the machinery and the ground at the same time. Then, still keeping your feet together, hop to safety as you leave the area.

"Don't play with outlets!"

Kinzlee Klomp, Age 12

Kinzlee warns readers not to play with power outlets. Great advice, Kinzlee! Kinzlee's parents are Kaitlin and Austin Klomp from Box Elder, S.D.

Kids, send your drawing with an electrical safety tip to your local electric cooperative (address found on Page 3). If your poster is published, you'll receive a prize. All entries must include your name, age, mailing address and the names of your parents. Colored drawings are encouraged.

Fresh BREADS

ZUCCHINI BREAD

Ingredients:

3 eggs
2 cups sugar
1 cup oil
2 tsps. vanilla
3 cups flour
1 tsp. baking soda
1/2 tsp. baking powder
1 tsp. salt
1 tsp. cinnamon
3 cups zucchini (shredded)

Method

Cream together eggs, sugar and oil. Then add the vanilla. Mix together the flour, baking soda, baking powder, salt, cinnamon and add to the egg mixture. Stir in zucchini. Pour into two loaf pans. Bake at 325°F for approximately one hour.

Kimberly Grimm
Southeastern Electric

GLUTEN FREE OATMEAL PANCAKES

Ingredients:

2 1/2 cups oats
1 tsp. baking powder
1 tsp. baking soda
1 tsp. cinnamon
1/2 tsp. salt
2 eggs
1/2 cup milk
3/4 cup applesauce
3 tsps. maple syrup
2 tsps. apple cider vinegar
2 tsps. vanilla

Method

Grind 2 1/2 cups oats in blender until turned into flour. In large bowl, whisk together oats, baking powder, baking soda, cinnamon and salt. Form a bowl in center, add eggs and whisk them. Then, add milk, applesauce, maple syrup, apple cider vinegar and vanilla. Stir to combine. Wait five minutes to thicken batter. Cook in oiled pan.

Jean Beauchamp
Southeastern Electric

KUNSI' FRY BREAD

Ingredients:

1 tbsp. yeast (quick rise)
2 tsps. sugar
1 qt. warm water
1 tbsp. oil/melted butter
1/2 tsp. salt
6 cups all-purpose flour
2 tsps. powdered dry milk
4 cups oil for frying

Method

Mix yeast, sugar, salt, warm water, oil/melted butter and let proof for 15 minutes. Mix flour and powdered dry milk. Make a well in the flour mixture and add yeast mixture. Gradually add warm water until dough comes together and is no longer sticky. Cover and let rise until doubled in size. Heat oil to fry dough. Separate dough into 10 to 12 baseball-size dough balls (or smaller if you want smaller pieces). Stretch dough balls and shape into oval discs or round discs approximately 1/4 inch thick. Test the oil to see if it's hot enough by dropping a small pea size piece of the dough in the oil. If it floats it's ready. Flatten the disc between your hands and stretch it again. Fry the bread until both sides are golden brown. Transfer to paper towel lined plate to drain. Continue until all the dough is fried. Enjoy with soup or a Spam and egg sandwich or taco toppings.

Sheila Ironheart
Whetstone Valley Electric

Please send your favorite recipes to your local electric cooperative (address found on Page 3). Each recipe printed will be entered into a drawing for a prize in December 2025. All entries must include your name, mailing address, phone number and cooperative name.

Best Bets for Efficiency Projects and Upgrades

Miranda Boutelle
Efficiency Services
Group

Q: How do I calculate the return on investment when considering home upgrades?

A: For many people, their home is the biggest investment and the largest purchase they make in their lives. We want to make sure that we make good decisions to protect and maximize the benefits of the investment in our homes. Energy efficiency upgrades are potential investments that can save money by reducing the energy used in your home and pay for themselves over time. Rooftop solar is another energy investment that can reduce your electric bill by generating your own energy at home.

Using return on investment is a common method to determine the benefit of an upgrade. It measures the gain or loss of an investment relative to the cost. ROI is calculated by dividing the net profit – the total cost of the investment subtracted from total revenue generated – by the cost of the investment and multiplying by 100 to find the ROI percentage. The higher the percentage, the better the investment.

If you take out a loan, home equity line of credit or use a credit card, add the borrowed money and interest rate into the investment cost.

Let's put the calculation to work on a few home project examples. Keep in mind, the numbers used below are hypothetical. Prices will vary based on the scale of your project and the cost of labor and materials in your area.

Adding insulation and air sealing your home are some of the most cost-effective home improvement projects and can save money year-round by reducing the energy needed from your heating and cooling systems. The United States Environmental Protection Agency estimates that air sealing and insulation can save an average of 15% on heating and cooling costs or an average of 11% on total energy costs, with higher savings in the north and south because of more extreme temperature swings.

Attics, walls, rim joists or floors over crawlspaces should be insulated. The ROI will vary based on your location, existing insulation levels and project cost.

Let's say you spend \$3,000 to insulate your home, saving \$330 per year for the next 20 years. Your net profit is \$3,600. Then, divide the net profit by the total cost of the investment, \$3,000, and multiply it by 100. That's a ROI of 120%.

The energy efficiency impact of new windows in your home depends on the difference in efficiency of the new windows and the existing windows. You will see the most improvement when you go from the least efficient – single pane with no storm windows – to the most efficient new windows. The exact ROI for your home will also depend on your location, energy costs and the efficiency of your heating and cooling systems.

The EPA estimates upgrading single-pane windows to Energy Star®-rated windows can save about 12% of your annual energy use. Let's say you replace your existing windows for \$5,000, saving \$360 per year for the next 20 years. The ROI is 44%.

Windows and insulation upgrades have the added benefit of making your home quieter and more comfortable. They can also add value if you sell your home.

Rooftop solar is another investment that some people consider. Let's say a solar system costs \$20,000 and is projected to save \$30,000 over 25 years. With a net profit of \$10,000, the ROI is 50%. Solar system costs and savings vary depending on where you live, how you pay for the system and your cost for electricity.

It also has the potential of adding value to your home if you decide to sell. Yet, if you have a solar system loan and lease, it can add complexity to a potential sale.

You might be eligible for tax credits or incentives through your electric cooperative or state programs to reduce the upfront costs for energy efficiency or renewable energy projects.

Most of us have limited funds for investing in our homes. Compare costs and potential savings to make the best decisions for your home and your bank account.

PETE'S TAXIDERMISTRY

Liewer has been perfecting his taxidermy skills for over 45 years through his business, Pete's Taxidermy, in Burke, S.D.
Photo by Frank Turner.

Preserving More Than Just a Trade

Frank Turner

frank.turner@sirea.coop

When does the passion for a lifetime of work begin? For Pete Liewer, owner of Pete's Taxidermy, it started at age 12 with a middle school science project in Burke, S.D.

His teacher challenged the class to bring in a bird and try their hand at taxidermy.

"My first bird was a red-winged blackbird," Liewer recalled. "I'm sure it didn't look too good, but I was hooked – I thought it was the coolest thing I had ever seen."

Inspired by his teacher, Liewer and a friend spotted an advertisement in *Field & Stream* magazine for a correspondence course through the Northwestern School of Taxidermy. With his grandmother covering the \$14.95 fee, he set up a makeshift shop in his parents' basement, where he followed the step-by-step instructions that arrived by mail.

"My mom put up with me in the basement, making a mess every day," Liewer said.

At the time, Liewer's mother was a waitress at the Hillcrest Motel, and she would take Liewer's pheasant mounts and set them on the end of the Hillcrest salad bar. Hunters would come in to eat after the hunt and see his work, marked "Pete's Taxidermy."

"I thought I was pretty big stuff, you know," Liewer laughed.

Today, that hobby has grown into a 45-year career in taxidermy with a full-fledged taxidermy shop and showroom, served by Rosebud Electric Cooperative, just north of his hometown of Burke.

His show room boasts a wide range of prairie flora and fauna, including life-sized elk and buffalo, deer and much more.

Each year, Liewer estimates he completes more than 1,500 mounted pheasants, along with ducks, geese and turkeys – a workload he once managed

on his own. In recent years, he has brought on four taxidermy apprentices under his license to help lighten the load, along with several others in the shop who assist with set-ups, finish work, and carpentry.

"I also work with a few people who work out of their homes who we supply with feathers for wreaths, custom knives, furs, earrings and picture frames – just all kinds of cool stuff," he said.

Although Liewer has never entered his mounts in contests, his craftsmanship has caught the attention of high-profile customers, including Bass Pro Shops and country artist Zac Brown. Still, he doesn't measure success by awards or celebrity clients. For Liewer, the real test is whether his work can impress the veteran hunter or a visitor walking into his showroom. He says the response from his customers far outweighs anything an award could ever give him.

"The people who come through really tout us – they say, 'this is the coolest places that we have ever seen in our life' – and that just says it all," said Liewer.

RURAL ELECTRIFICATION

WEST CENTRAL

Last to Incorporate, Lasting in Impact

Frank Turner

frank.turner@sdrea.coop

Before rural electrification, South Dakota's farmsteads ended the day in silence. There was no music from the radio playing in the living room or hum of an electric refrigerator in the kitchen. Over decades of work, power lines would stretch across the prairie through President Franklin Roosevelt's vision of rural electrification, carrying not only electricity but also a new way of life.

In 1935, President Roosevelt created the Rural Electrification Administration (REA) as part of his New Deal policies to revive a nation struggling through the Great Depression and bring electricity to

America's rural communities, something that private and investor-owned utilities refused to do.

Clay-Union Electric was the first rural community in South Dakota to adopt the cooperative model in 1937, and West Central was the last in 1949. But as former West Central Electric CEO Steve Reed can attest, being the last to adopt the cooperative way didn't hinder their success. Once the path to forming a cooperative was established, the members of West Central benefitted from electricity's transformation from a luxury into a necessity with the rest of rural South Dakota.

"We couldn't rely on the power

West Central Electric board directors present a check to a representative of Central Electric and Gas in 1951, finalizing the cooperative's purchase of the private utility system. *Photo submitted by West Central Electric.*

companies to come out to serve rural South Dakota," said Reed, a 42-year cooperative veteran who joined West Central Electric as a lineman and worked his way up to CEO. "They were never going to do it at price that was affordable, so rural electric has been great for not only the members of West Central but the entire country."

So why was West Central the last to form a cooperative? According to Reed, the rural communities that organized West Central Electric in 1949 had several hurdles to clear. The first was overcoming the sheer remoteness of the territory, which then had a system that averaged 1.5 members per mile of line constructed, even including towns and

cities. Because members were few and far between, the REA needed the towns in the proposed West Central territory to become members: from Philip to Hayes and Murdo to Kennebec, where West Central Electric was incorporated.

That led to the next problem: the towns and cities in the proposed West Central Electric's service territory were already being served by Central Electric and Gas, a private company based out of Philadelphia. This obstacle didn't stop the people who had a vision of what rural electrification could accomplish. Following lengthy discussion in 1951, West Central Electric purchased systems from Central Electric and Gas for \$850,000 using low-interest REA federal funds.

Former West Central Electric Attorney John Larson outlined the discussions in his 50th Annual Meeting Speech: "There was no choice but to buy out the private supplier, Central Electric and Gas, and that was accomplished... (Former South Dakota Governor M. Q. Sharpe, who served as West Central Electric's attorney), showed up for the meeting that morning unshaven and unkempt, with a threadbare shirt and suit. For the entire morning, he listened with his head down and eyes shut to the Philadelphia lawyer types who represented the power company. After the dinner break, however, he showed up in a new suit, shaved, and took over the meeting by dictating exactly what West Central would do and what we would pay. During an afternoon break, one of the Philadelphia types was heard to mutter, 'You want to watch that old guy. When he's got his head down and eyes shut, he's not sleeping!'"

West Central Electric's 1951 purchase included all the electrical infrastructure within the town boundaries, as well as the diesel generation system extending west from Chamberlain. Shortly after, the evolution of West Central Electric progressed with the construction of distribution systems to farms and reconstructing the systems of various

towns, including the installation of street lights.

Since that iconic moment, West Central has continued to grow with its membership, meeting more demand for electrical energy than had been previously thought possible, a reflection of just how integral electricity has

become in day-to-day living for business owners, ag producers, and rural folk alike.

"That moment modernized us," said Reed. "It just did so much for everything – and without it, where would we be?"

Basin Electric Tour: Educational and Enjoyable

Flip a switch and the lights come on. Behind this simple action is a complex network of people, power plants and transmission lines that work around the clock. What better way to understand how electricity is made than to visit a power plant and see for yourself.

As part of member education efforts, Codington-Clark Electric and H-D Electric, Clear Lake, sponsored a tour of Basin Electric.

The group left Codington-Clark's Service Center by chartered bus and traveled to Bismarck where they enjoyed lunch, shopping and swimming. The evening was spent on a riverboat cruise on the Missouri River.

After spending the night in Bismarck, the group left for Buelah, N.D. where the day was spent touring Basin Electric Cooperative facilities. The first stop was a tour of Dakota Gasification Company. The synfuels plant transforms coal into natural gas and other byproducts.

The next stop was a tour of Antelope Valley Station, a 900-megawatt coal-fired power plant. At the plant, members learned about the 277-foot boiler which transforms heat produced from the coal mine into steam energy which then turns the plant's turbines.

The last stop was a tour of Coteau

Properties' Freedom Mine. Members learned about the mining and reclamation process while on a guided tour of the coal mine. They watched as the mine's electric loading shovel removed huge buckets of overburden from above the lignite coal seam. They also viewed the mine's 300-ton coal haulers that transport lignite coal from the coal pit to the handling facilities.

Codington-Clark's Tammy Popham served as tour chaperone.

This is the sixteenth time the two co-ops have partnered together for the tour.

Basin Electric is a consumer-owned, regional cooperative headquartered in Bismarck, N.D. Basin's member systems' service territories span 550,000 square

miles from the Canadian to the Mexican borders. Their members constitute a vital network of generation, transmission and distribution systems that deliver electricity to 3 million electric consumers in parts of North Dakota, South Dakota, Wyoming, Colorado, Minnesota, Iowa, Nebraska, Montana, and New Mexico.

Basin Electric has two coal-based power plants in North Dakota – the Antelope Valley Station, at Buelah, and the Leland Olds Station, at Stanton.

Codington-Clark has annually sponsored the Basin Tour since 1966. If you would like to join next year's tour group, contact Tammy at the Co-op's business office and reserve your seat.

Members tour the model room at Antelope Valley Power Plant.

Dustin Beebe looks inside the 277-foot boiler at Antelope Valley Station.

Operation Round Up®

“Small Change Can Make a Big Difference”

What is Operation Round Up®?

Operation Round Up® is a voluntary program that does just what the name implies. Each month we will “round up” the electric bills of participating members to the next highest dollar. For Example, a members monthly bill of \$150.75 would automatically be rounded up to \$151.00, with the additional 25 cents going to the Operation Round Up Fund. Donations are tax deductible, and members will be sent a summary of yearly contributions each January.

How do I participate?

Participation in Operation Round Up is strictly voluntary. You can sign up by sending back the attached mailer with your payment, or you can stop in or call and ask to be included in the Operation Round Up® program.

How much will it cost members?

The average contribution per member is about 50 cents per month or \$6.00 per year. With this small change, thousands of dollars can be generated and will mean a big difference to the people in our service area.

Where will the money go?

All Operation Round Up donations will be placed in a trust administered by an independent Board of Directors.

The Board of Directors is made up of five Codington-Clark Electric board members who serve on the board on a voluntary basis. It is the responsibility of the Board to receive, evaluate all requests and to decide how to distribute the funds. The trust fund will be used for charitable projects and causes throughout the service area.

Who is eligible for funds?

The funds will be available to help any charitable projects for organizations, groups, families, or individuals within the service territory of Codington-Clark Electric. No funds shall in any way be used to support any candidate for political office or for any political purpose.

How do I apply for funds?

An application must be submitted to the Trust Board by a member of Codington-Clark Electric. Watch for future mailings of the Codington-Clark Electric Cooperative Connection newsletter for an announcement of when applications will start being accepted for contributions from the fund. For more information regarding Operation Round Up contact Codington-Clark Electric at (605) 886-5848.

Together, by giving a few cents a month, Codington-Clark Electric members can make a big impact on life in our area!

Yes, I want to participate in Operation Round Up
(If on budget billing 50 cents per month will be donated to the trust fund)

GENERATIONAL FARMERS

Four Generations of Lyon-Lincoln Electric Members Ranch on Lake Benton-Area Land

Jacob Boyko
jacob.boyko@sdra.coop

Nestled amongst the rolling green pastures of western Minnesota, there's a generations-old farm worked by one family for over three quarters of a century.

From their Lincoln County property, the Weber family watched rural electrification improve the prairie, connect neighbors and bring reliability to farmsteads. Now they watch precision agriculture guide planting, bovine genetics strengthen herds, and social media and the internet connect their business to the wider world.

It all started in 1947, when John and Marie Weber moved into the old three-bedroom farmhouse from nearby

Elkton, S.D. Luckily, the move came six years after Lyon-Lincoln Electric Cooperative energized lines in the area, so the Weber home enjoyed many of the modern amenities brought on by rural electrification, including electric lights, kitchen appliances and a washing machine.

"I know I had the best mom and dad in the world," said JT, one of John and Marie's eight children, who today helps run the ranch with his wife, Luann, their three sons and their families. "Dad was very community-oriented. He was on the school board, the elevator board and the rural water board. In fact, he was instrumental in starting rural water. He went from place to place, talking people

into getting rural water."

JT was born on the farm in 1957 during a blizzard that left his parents unable to reach the hospital in town. As a boy, he remembers collecting rainwater in a cistern and using it for cooking, cleaning and baths. Even as rural electrification began to transform the countryside, life on the farm remained far different – and often harder – than life in town.

"When I grew up, back in the 60s and 70s, if you milked 40 cows that was quite a few," JT said. "We were milking about 100 cows – we were kind of ahead of our time. But we had a big family, and us boys, we got right in there."

He continued, "We were hauling silage, hauling manure, milking cows and doing chores. But Dad never told us to do anything. He always asked us if we wanted to, and there's a difference. You wanted to work for him. He made you want to work for him, and it was never a burden."

That was a quality JT kept in mind with his own seven children on that same

ranch where he grew up. Today, JT and Luann's sons Jake, Garret, and Matt all stay involved in the ranch, now Weber Bros. Cattle.

"Growing up, I kind of always had that bug to get in the tractor, chase cows, put up fence, and do what needs to be done," explained Jake, the oldest son.

Today, they specialize in raising purebred Angus bulls and Simmental-Angus crosses, while also producing corn silage and alfalfa to help sustain the operation. While the operation may be old, it's not at all low-tech.

"Our main thing is our bull program," Jake said. "We sell about 50 registered Angus and Simmental bulls by private treaty every spring, and we also develop 50 replacement and bred heifers, and market a portion of them. We do a lot of artificial insemination and embryo transfer. Some of the more elite donor cows we can get our hands on by buying females and buying embryos. We're just trying to make good cows."

Jake, like his dad, graduated from South Dakota State University with an animal science degree, and was excited to return to the ranch to incorporate some of his new skills into the operation.

"When I got back from school, we really amped up our embryo transfer program with different ideas and stuff I learned about genetics from contacts and producers we've met over the years," Jake continued. "We went from selling 10 bulls per year to selling close to 50 bulls."

Jake's younger brother and fellow SDSU animal science graduate, Garret, keeps involved on the family's ranch as well. Though he works full time as swine genetic company Hypor's US Sales Manager, he helps out with the operation and finds the time to run Weber Bros. Cattle's social media pages, which he says has successfully expanded their presence in the market.

"Whether it's Facebook, Instagram, Snapchat or our company website, we're able to hit such a broad spectrum of people, and it's a great way to tell the story of our operation, what we're doing year-in and year-out and advertise the

genetics of the cattle that we're showing and selling," Garret explained. "We're able to have a much greater touch point of individuals that we can reach out to and market our livestock."

JT, Jake and Garret all credit their spouses and families for supporting them as they work to grow the operation.

"It took a long time and a lot of support for us to get established and get to where we are today," JT said.

Looking toward the future – and the next generation, their goals are to make an already successful operation even better.

"We'll keep working with the cow herd, continue to make improvements and make better genetics every year," Jake said. "I want this opportunity to be available to my kids, so that if they want to be able to do this, they'll have the same chance we did."

Garret added, "It's something that I hope my sons can do someday if we're able to continue to grow the operation. I hope it's something they're going to be able to share and cherish with their own kids, because those are the memories that stick with you forever."

CYBERSECURITY THINK BEFORE YOU CLICK

Frank Turner

frank.turner@sdrea.coop

This October marks the 22nd National Cybersecurity Awareness Month, first established in 2004 by the U.S. Department of Homeland Security and the National Cybersecurity Alliance. The annual observance was created to highlight the importance of cybersecurity and safe online practices.

This year's theme, "Stay Safe Online," emphasizes the small but important steps individuals can take to reduce online risks, especially during an age when it seems a new data breach makes headlines every single day. While big companies often make headlines when they are hacked, everyday people are just as likely to be targeted through scams, phishing attempts, or weak passwords.

Jacob Steeg, IT Administrator at Rushmore Electric Power Cooperative, says there are many easy-to-implement strategies and tips people can use to reduce the likelihood of hacks and personal data breaches. Steeg has worked in the information technology field for more than 16 years and has spent the past three with Rushmore Electric Cooperative.

The first step is staying vigilant. Steeg compares cybersecurity to a bank: even if the vault – or in this case, technology – is impenetrable, a human can still be tricked into opening it. That's how phishing works. Hackers send fraudulent, attention-grabbing emails or messages designed to trick users into clicking a link or giving away personal information.

"If you convince the guard of your bank to give you the code to the safe, it

doesn't matter how secure the vault is," Steeg said. "That's what phishing does. Bad actors are trying to bait you into giving up the information they need to break in."

"These messages may all look different, but they tend to follow the same script," he added. "They try to heighten your emotions with money, fear, or urgency so that you stop thinking clearly and hand over information you normally wouldn't."

Steeg also recommends users enable two-factor authentication. This extra layer of security requires not just a password, but a second step, such as entering a code sent to your phone or approving a login through an authentication app. Even if hackers steal your password, they won't be able to access your account without that second piece of verification. Steeg says this extra step may feel inconvenient at first, but it's one of the simplest and most effective tools for keeping accounts safe.

But of all the tips mentioned, Steeg says the most important step to staying secure online is to use different

passwords for different websites.

"By using different passwords, you are reducing your attack surface," he said. "Let's assume that someone was able to hack into a small forum tied to a specific interest you had 15 years ago. The person who built that forum likely isn't a cybersecurity expert – and these small forums are exactly what are getting breached. If you're using the same email and password across every site, hackers suddenly have access to your bank account, social media and more."

Instead of trying to remember 100 different passwords for 100 different websites, Steeg advises using a password manager, which securely stores your password information and can generate strong passwords for each account. He also recommends using a password that is at least 14 characters long.

"A password manager's whole job is to store your passwords safely," said Steeg. "It's not impossible that it gets breached, but your information is a lot safer there."

Steeg says it's also important to share these basic online safety practices with those around you, especially older relatives, who are often the most vulnerable to scams.

"Please reach out to the less tech-savvy people around you, like the elderly," he said. "The world has changed so much around them, and they might just not know. Just tell them what's out there and what is coming. Try to help them be aware that you aren't just valuable for the money that's in your pocket; you are also valuable for the data you store online, and somebody wants it."

At the end of the day, Steeg says one of the best ways to stay safe online is to "remember the stuff your parents taught you as a kid."

"If it's too good to be true, it's probably not," he said. "Nobody is reaching out to you via email to give you a gift or free money. Just because the medium has changed, doesn't mean that the scam is any different."

An Important Message About Cybersecurity

The IRS will never contact you directly by email, text message or social media to ask for personal or financial information. If you receive a message claiming to be from the IRS, it's a scam.

The agency communicates primarily through official letters sent by mail. If you're unsure whether a message is legitimate, do not click links or provide information. Instead, contact the IRS directly through its official website or phone number.

OCT. 10-12
Black Hills Powwow
 Rapid City, SD
 605-341-0925

To have your event listed on this page, send complete information, including date, event, place and contact to your local electric cooperative. Include your name, address and daytime telephone number. Information must be submitted at least eight weeks prior to your event. Please call ahead to confirm date, time and location of event.

UNTIL OCT. 31
Wallace Dow, Prairie Architect
Traveling Exhibit
 Lake County Museum
 Madison, SD
 605-256-5308

OCT. 3
DSU Architecture Walking Tour
 3-4 p.m.
 Lake County Museum
 Madison, SD

OCT. 3-5
Black Hills Film Festival
 Journey Museum
 Rapid City, SD
 605-574-9454

OCT. 4
Pumpkin Train, Vendor
Showcase
 Prairie Village
 Madison, SD

OCT. 4-5
Sioux Falls Quilt Guild
 Sat. 9 a.m.-5 p.m.
 Sun. 11 a.m.-4 p.m.
 Sioux Falls Convention Center
 Sioux Falls, SD
 605-951-2034

OCT. 10-11
Holman Acres Pumpkin Fest
& Vendor Show
 Fri. 12 p.m.-6 p.m.
 Sat. 10 a.m.-6 p.m.,
 Philip, SD
 605-441-1060

OCT. 11
A Celebration of Classic Hits
 7 p.m.
 Gayville Music Hall
 Gayville, SD
 605-760-5799

OCT. 11
Howard Fall Festival
 10 a.m.-4 p.m.
 Miner County 4-H Grounds
 Howard, SD

OCT. 18
Arts & Crafts Festival
 10 a.m.-4 p.m.
 Faulkton, SD

OCT. 18
Northern Prairie Arts
Barn Quilt Class
 Highland Conference Center
 Register by Oct. 6
 Watertown, SD
 605-882-1780

OCT. 18-19
Heartland Quilting Stars Show
 Highland Conference Center
 Mitchell, SD
 605-770-1551

OCT. 19
Helping With Horsepower
Year-End Horse Show
 10 a.m.
 Reclamation Ranch
 Mitchell, SD

OCT. 24
Humor for Heroes
Comedy Night Fundraiser
 Comedians, Silent Auction
 Tickets \$15, two for \$25
 1600 W. Russell St.
 Sioux Falls, SD
 605-336-3470

OCT. 25
The Greats of Country
 7 p.m.
 Gayville Music Hall
 Gayville, SD
 605-760-5799

OCT. 31-NOV. 2
Haunted Trail at
Reclamation Ranch
 7-10 p.m.
 Reclamation Ranch
 Mitchell, SD

NOV. 1
Reliance Christmas Carousel
 9 a.m.-3 p.m.
 Reliance, SD
 605-730-1462

NOV. 1
Fall Fling Craft/Vendor Show
 10 a.m.-2 p.m.
 Dakota Christian School
 Corsica, SD
 605-366-7940

NOV. 1
Black Hills Meat Fest
 2-4 p.m.
 Nerdy Nuts Expo Hall
 Rapid City, SD

Note: We publish contact information as provided. If no phone number is given, none will be listed. Please call ahead to verify the event is still being held.
